

Adco engine purifier is a Special cleaner for cleaning sludge and wear products of engine parts, including the most inaccessible elements of the oil system. Product purify and protect the oil system and filter of oil pumps. During the washing process, it provides reliable lubrication, preventing wear of engine parts. Due to the unique composition of detergent-dispersing additives, it guarantees highly effective and safe removal of carbon deposits, including from the bottom of the engine.

PROPERTIES:

Remove the contamination and resin formations in the whole oil system

- Dissolve residues from the combustion process
- Providing high quality anti-friction & wear properties
- Improve and stable compression
- Significantly reduce fuel and oil consumption

- Approx. 15 minutes
- Before every oil change
- All petrol and diesel engines

ENGINE PURIFIER

ENGINE CARE & PROTECT

Highly efficient additive package provides unique multifunctional effect in engine oil formulated to improve oil pressure and reduce its consumption in engines with high mileage by 30% the product reduces soot formation and eliminates exhaust gas smoke.

PROPERTIES:

- Anti-wear components minimize wear on engines with any mileage and extend their service life.
- Improves the stability and strength of the oil film on the rubbing parts of the engine, which facilitates cold start and reduces starting wear.
- Suitable for petrol and diesel engines and all types of engine oils (synthetic, mineral, etc.).
- For improved wear and tear protection qualities of all types of engine oils.
- Ideal lubrication ensures less wear and tear.
- Minimizes friction and prevents against wear & corrosion.
- Improves operational dependability in hot conditions.
- Prevents against fuel dilution in engine oils, particularly during frequently short trips.

- Works during operation
- After every oil change
- Easy application without any extra work

Adco engine flush is effective flushing agent for removing sludge and wear soots residuals of engine parts, including the parts of the oil system. Product purify and protect the oil system and filter of oil pumps. During the washing process, it provides reliable lubrication, preventing wear of engine parts. Due to the unique composition of detergent-dispersing additives, it guarantees highly effective and safe removal of carbon deposits, including from the bottom of the engine.

PROPERTIES:

Remove the contamination and resin formations in the whole oil system

- Dissolve residues from the combustion process
- Providing high quality anti-friction & wear properties
- Improve and stable compression
- Significantly reduce fuel and oil consumption

- Approx. 15 minutes
- Before every oil change
- All petrol and diesel engines

ENGINE FLUSH

CERATAR 700

CERATAR 700 is a new generation engine oil additive, which enhance existing products due to advanced technology that utilizes lubricating particles. The product provides very powerful solid lubricants that decrease the coefficient of friction and resist to the highest temperatures. The additive forms an extremely resistant protective film that substantially reduces wear. Even when the engine is not running, this film remains on the internal parts of the engine, ensuring optimum protection during cold starting

PROPERTIES:

High performance additive

- Reduced wear and tear due to the creation of a stable wear protection layer
- Wear and tear resistant ceramic
- Improved wear protection
- Compatible with all mineral and synthetic engine oils
- Less running noise and reduced exhaust gas emissions
- Increased engine performance and optimized fuel consumption

- Works during operation
- After every oil change
- Easy application without any extra work

Highly efficient additive package provides unique multifunctional effect in engine oil - formulated to improve oil pressure and reduce its consumption in engines. the product reduces soot formation and eliminates exhaust gas smoke.

PROPERTIES:

Highly effective additive package for increased wear and tear protection properties of all types of engine oils.

- Reduces wear and tear
- Protects against corrosion
- Prevents from deposits in the oil and lubrication system
- Combats harmful engine acids
- Increases reliability of operation and prolonged life span of all components
- Decreased oil consumption and emissions
- Improved motor performance

- Approx. 15 minutes
- Before every oil change
- All petrol and diesel engines

OIL BOOSTER

ENGINE OIL STOP LEAK

Oil Leak-Stop is a special engine oil additive made by using unique technologies. Compatible with any engine oil and suitable for any type of engine. Recommended for extreme operating conditions, high oil consumption and unstable engine operation. contains a highly effective additive package to stop loss of engine oil caused by leakage helps to maintain engine gaskets and keeps them soft and resilient.

PROPERTIES:

- Modifies the surface structure of piston rings and hydro-compensators.
- Restores elasticity of seals and gaskets.
- Reduces oil flow through the piston rings by maintaining the oil viscosity at the required level.
- Increased engine performance.
- Less wear and tear.
- Reduction of oil loss.
- Improved reliability of operation.

- Works during operation
- After every oil change
- Easy application without any extra work

New technology additive package provides remarkable versatile effect in engine oil - formulated to improve oil properties and reduce its consumption in engines. the product reduces sludge formation and eliminates exhaust gas smoke. Plus reduce the fuel consumption.

PROPERTIES:

Make an extra effective Nano film in the engine oil

- Is recommended for use with turbos, catalytic converters and particulate filter.
- Protects all the internal surfaces of engine and equipment e.g. oil systems, automatic and manual gearboxes, differentials, transfer boxes.
- Keeps the O-rings and shaft seals soft and resilient.
- Prevents wear, tear and corrosion.
- Prevents from deposits in the oil and lubrication system.
- Combats harmful engine acids, increases reliability of operation and prolonged life span of all components, decreased oil consumption and emissions, improved motor performance.

- Approx. 15 minutes
- Before every oil change
- All petrol and diesel engines
